

MANJUNATHA M K

DATA ENGINEER | AWS DATA ENGINEER

Mangalore, India | +91 7338594205 | mkmanjunatha9@gmail.com

PROFESSIONAL SUMMARY

Data Engineer with 5 years of IT experience, including 4 years focused on data engineering, with experience across enterprise technology environments. Skilled in developing and supporting data processing workflows using Python, PySpark, Apache Spark, Amazon S3 and Amazon EMR. Experienced in data ingestion, cleansing, transformation, validation and aggregation for structured and semi-structured datasets using PySpark and Spark SQL. Hands-on exposure to Spark performance optimization, S3-based data processing, EMR workloads and Apache Airflow workflow orchestration. Familiar with production practices including job monitoring, error handling, data quality checks, troubleshooting and controlled reprocessing, with secondary exposure to Databricks.

TECHNICAL SKILLS

Cloud & Data Platforms: AWS, Amazon S3, Amazon EMR, Databricks

Data Processing: Apache Spark, PySpark, Spark SQL, Distributed Data Processing

Data Engineering: Batch ETL, Incremental Loads, Data Transformation, Data Validation, Parameterized Jobs

AWS Data Engineering: EMR Clusters, EMR Steps, Spark Job Submission, S3 Data Processing, S3 Partitioning

Workflow & Scheduling: Apache Airflow, EMR Steps, Workflow Dependencies, Job Scheduling, Retry & Failure Handling

Programming & Querying: Python, PySpark, SQL, UNIX Shell Scripting

Storage & Formats: Amazon S3, Parquet, JSON, CSV

Databases: MS SQL Server, MySQL, Amazon RDS

Performance & Support: Spark Optimization, Partitioning, Repartitioning, Broadcast Joins, Caching, Job Monitoring, Error Handling, Production Support

Operating Systems: Linux, Windows

PROFESSIONAL EXPERIENCE

INFOSYS LTD., MANGALORE, INDIA

Systems Engineer | January 2021 – Present

Client: Toyota Material Handling Europe

Project / Data Engineering Roles: Cloud Data Engineer | Data Engineer | Spark Developer | AWS Data Engineer

ROLES AND RESPONSIBILITIES

- Developed ETL data processing workflows using PySpark and Apache Spark to transform raw datasets into structured, analytics-ready data.
- Built PySpark-based ingestion and transformation workflows for structured and semi-structured datasets.
- Implemented data cleansing logic to handle null values, invalid records, inconsistent formats and duplicate records.
- Used Spark DataFrames and Spark SQL for joins, aggregations, filtering, transformations and business-rule implementation.
- Developed reusable PySpark transformation logic for recurring data processing requirements and parameterized processing scenarios.
- Implemented full-load and incremental processing approaches based on source characteristics and processing requirements.
- Applied window functions, conditional transformations and aggregations to prepare datasets for downstream consumption.
- Used Amazon S3 as a scalable storage layer for raw, intermediate and processed datasets.
- Processed S3-hosted data using PySpark workloads running on Amazon EMR.
- Worked with Parquet, JSON and CSV data formats for ingestion, transformation and output processing.
- Designed logical S3 partition layouts around processing dates and common access patterns to improve data organization and retrieval.
- Controlled output file sizes using repartition and coalesce strategies during Spark processing.
- Developed and executed PySpark applications on Amazon EMR for distributed batch processing.
- Configured EMR clusters and Spark runtime settings according to workload requirements and processing characteristics.
- Submitted and managed Spark applications through EMR Steps and spark-submit.
- Monitored Spark applications and investigated failures using driver, executor and cluster logs.
- Optimized Spark workloads using partitioning, repartitioning, caching and broadcast joins to improve execution efficiency.
- Investigated data skew, shuffle-related issues and resource bottlenecks affecting Spark execution.
- Developed and supported Apache Airflow workflows for scheduling and orchestrating data processing jobs.
- Configured task dependencies, retries and failure-handling mechanisms for scheduled data workflows.
- Monitored scheduled jobs and investigated failures to maintain reliable pipeline execution.
- Implemented data validation checks for mandatory fields, duplicate records, accepted values and source-to-target reconciliation.
- Supported controlled backfills and reprocessing activities during pipeline recovery and data correction scenarios.
- Documented transformation logic, processing workflows and operational procedures for support and knowledge sharing.
- Worked with Databricks notebooks and PySpark-based processing for data transformation and analytical workloads.

WORK EXPERIENCE

Infosys Ltd.

Data Engineer | January 2021 – Present

Mangalore, India | Client: Toyota Material Handling Europe

- Supported enterprise technology operations in a global client environment while contributing to data engineering, troubleshooting, monitoring and production support activities.
- Collaborated with cross-functional technical teams to resolve incidents, investigate recurring issues and maintain reliable service delivery.
- Worked within structured incident, change and problem-management processes and maintained operational documentation.

CERTIFICATIONS

- Microsoft Certified: AZ-104 Azure Administrator
- Microsoft Certified: AZ-900 Azure Fundamentals

ACHIEVEMENTS

- Top Performer – 2024: Recognized for resolving 600+ end-user issues with exceptional turnaround time and customer satisfaction.
- Infosys RISE Award: Recognized for critical support during the SAP Go-Live printer configuration project.
- Scaled-Up Performance Recognition: Recognized for rapid ramp-up and consistent SLA adherence in L3 operations.
- Infosys Insta RISE Award – Awarded 3 times in recognition of consistent performance, contribution, and excellence in project delivery.

QUALIFICATION	INSTITUTION	YEAR
Bachelor of Computer Applications (BCA)	Online Degree	2024–2027 (Pursuing)
Diploma in Electronics & Communication Engineering	SDM Polytechnic, Ujire	2021
